SOLID WASTE MANAGEMENT UNITS, HAZARDOUS WASTE MANAGEMT UNITS, AND AREAS OF CONCERN

This section identifies each of the known solid waste management units (SWMUs), hazardous waste management units (HWMUs) and Areas of Concern (AOCs) at the facility and provides the information required by 270.14(d)(1) and (2).

The following definitions are found in EPA regulations, guidance, and preambles to RCRA rulemaking notices.

- A "**Solid Waste Management Unit**" is "[a]ny discernible unit at which solid wastes have been placed at any time, irrespective of whether the unit was intended for the management of solid or hazardous waste. Such units include any area at a facility at which solid wastes have been routinely and systematically released." [61 Fed. Reg. 19,432, 19,442-19,443 (May 1, 1996); *accord* EPA, Call Center Questions and Answers (Mar. 1, 2004)]. Examples of SWMUs include container storage areas, tanks, surface impoundment, waste piles, land treatment units, landfills, incinerators, underground injection wells and other physical, chemical and biological treatment units, stormwater retention ponds containing contaminated sediments, industrial sewers designed to collect wastes, wood preservative kickback areas.

- A **Hazardous Waste Management Unit** is a "contiguous area of land on or in which hazardous waste is placed, or the largest area in which there is significant likelihood of mixing hazardous waste constituents in the same area." [40 C.F.R. § 260.10.] Examples of HWMUs include "a surface impoundment, a waste pile, a land treatment area, a landfill cell, an incinerator, a tank and its associated piping and underlying containment system and a container storage area." [*Id*].

- An **Area of Concern** is "any area of a facility under the control or ownership of an owner or operator where a release to the environment of hazardous wastes or hazardous constituents has occurred, is suspected to have occurred, or may occur, regardless of the frequency or duration." [63 Fed. Reg. 56710, 56715, n.1 (Oct. 22, 1998).] Areas of concern include areas that have experienced one-time spills of hazardous waste or hazardous

constituents that have not been adequately cleaned up. [61 Fed. Reg. 19,432, 19,443 (May 1, 1996).]

J.1 Characterization of the Solid Waste Management Units

The facility has identified three operating areas and one past operating area on the facility containing SWMUs, HWMUs, and AOCs. The areas containing these units are:

1) The container storage area,
2) The storage tank and unloading area, consisting of tanks T-1, T-2, T-5, T-6, and T-18, and the Hopper H-1,
3) The carbon reactivation furnace and associated emission control equipment (RF-2), and
4) The inactive carbon reactivation furnace and associated emission control equipment (RF-1) as well as T-8.

Within these areas, a list of SWMUs, HWMUs, and AOCs has been compiled for inclusion with this Part B Permit Application. Tables J-1, J-2 and J-3 list the identified SWMUs, HWMUs, and AOCs, respectively. The SWMU and HWMU tables provide the following information for each identified unit:

1) The designation of each type of unit (name, description);
2) The general dimensions and structural description of each unit;
3) The date each unit was first operated; and
4) Specification of all wastes that have been managed in each unit, to the extent available.

The location of each SWMU, HWMU, and AOC is shown on a series of drawings designated as Figures J-1 through J-7.

J.2 Releases

Any leaks, drips, or spills from any of the solid waste management units identified in Section J-1, above, are routinely cleaned up as soon as practical and the area decontaminated to remove any hazardous wastes or hazardous waste constituents. The facility has experienced four reportable releases of hazardous wastes or hazardous waste constituents from the solid waste management units, as follows:

Nov 10, 1994 – Facility Lift Station Overflow – Reported to NRC, CRIT, LEPC – overflow caused by a power outage.

April 17, 1995 - Facility Lift Station Overflow – Reported to NRC, CRIT, LEPC – overflow caused by power outage.

February 15, 1996 - Facility discharge line was accidentally cut by Southwest Gas contractor relocating natural gas line - Reported to NRC, CRIT, LEPC.

September 26, 1998 – Spill of recycle water from a trailer outside the facility gate - Reported to NRC, CRIT, LEPC.

For each release, a complete investigation and report has been compiled and is kept at the facility. The following information, at a minimum, is recorded for any release from a solid waste management unit identified in Section J.1 above:

1) Date, type, quantity, and nature of any release;
2) Groundwater monitoring and other analytical data;
3) Physical evidence of stressed vegetation;
4) Historical evidence of any releases;
5) Any state, federal, or local enforcement action to address releases;
6) Any public citizen complaints that indicate a release; and
7) Any other information showing the migration of a release.

Because these spills have been cleaned up, the spill areas are not included as AOCs, in accordance with the definitions provided above.
